DETAILED ACTION

Response to Amendment

1 Applicant amendment overcomes objection to claim 10 and the objection is withdrawn.

Allowable Subject Matter

2 Claims 1-26 are is/are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites, in part, "simulating an ideal base-band signal from the modulation symbol sequence as reference signal; and evaluating the deviations of samples of the corrected, real base-band signal from samples of the ideal base-band signal". This feature in combination with the remaining claimed structure avoids the prior art of record.

Claims 2-21 and 25 depend from claim 1.

Claim 22 recites, in part, "a digital filter for simulating an ideal base-band signal from the modulation symbol sequence; and an evaluation device for evaluating the deviations of the samples of the corrected, real base-band signal from the samples of the ideal base-band signal". This feature in combination with the remaining claimed structure avoids the prior art of record.

Claims 23, 24 and 26 depend from claim 22.

It is these limitations, which are not found, taught or suggested in the prior art of record, and are recited in the claimed combination that makes these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

3 Applicant's arguments, see amendment, filed 29 July 2005, with respect to simulating an ideal base-band signal from the modulation symbol sequence as reference signal and evaluating the deviations of samples of the corrected, real base-band signal from samples of the ideal base-band signal have been fully considered and are persuasive. The §102(b) of claims 1, 2 and 22 has been withdrawn.
